<b>Job Title</b>	Postdoctoral Research Associate
<b>PVN ID</b>	CC-2312-006018
<b>Category</b>	Postdoctoral
<b>Location</b>	The CITY COLLEGE of NEW YORK
<b>Department</b>	NOAA CESSRST Center
<b>Status</b>	Full Time
<b>Annual Salary</b>	\$65,000.00 - \$85,000.00
<b>Hour(s) a Week</b>	35
<b>Closing Date</b>	May 31, 2024 (Or Until Filled)

## General Description

---

The National Oceanic and Atmospheric Administration (NOAA) Center for Earth System Sciences and Remote Sensing Technologies (CESSRST) has openings for a number of postdoctoral positions and invites applications from qualified candidates. CESSRST is Cooperative Science Center (CSC) funded by the NOAA Educational Partnership Program with Minority Serving Institutions (EPP/MSI). The Center is a consortium of universities, dedicated to advancing research and education in Earth systems observations, modeling, and environmental sciences. The participating institutions are geographically distributed across the nation and have a strong commitment to fostering diversity, with a high enrollment of students from communities traditionally under-represented and historically excluded in STEM and the NOAA workforce.

### CESSRST CAMPUS LOCATIONS

- City College of New York, New York, NY (CCNY - Lead Institution)
- University of Maryland, Baltimore County (UMBC), Baltimore, MD
- University of Puerto Rico at Mayaguez, Mayaguez, PR (UPRM)
- University of Texas at El Paso, El Paso, TX (UTEP)
- San Diego State University, San Diego, CA (SDSU)
- Hampton University, Hampton, VA (HU)

Positions will be at CCNY (CESSRST Lead Institution at City College of New York, NYC), although some may be available at partner CESSRST institutions listed above. Successful candidates will contribute to cutting-edge research initiatives and collaborations within the specified areas:

1. Satellite and radar data assimilation
2. *In-situ* and ground-based remote sensing of atmospheric composition, and satellite atmospheric composition product validation and algorithm development.
3. Severe weather and hydrology applications
4. Satellite remote sensing of atmospheric soundings, including trace gasses
5. Modeling and/or observations of atmosphere-land-sea interactions, especially in coastal urban environments or the arctic

6. Remote sensing technology and algorithm development with environmental/ Earth science applications.
7. Climate and environmental impact studies on health, infrastructure, and/or economy employing social science methodologies and data science techniques.

## Other Duties

---

Responsibilities will include, but are not limited to:

- Conducting research aligned with a specific focus area.
- Collaborating with interdisciplinary teams, including faculty members, researchers, and students across multiple CESSRST campuses and NOAA partners. This may include spending time at a NOAA facility or laboratory.
- Co-designing and implementing research projects to include social impact on communities and/or relevancy to climate mitigation and adaptation.
- Disseminating research findings through publications, presentations, reports, and other knowledge-sharing platforms.
- Mentoring graduate and/or undergraduate students in related research activities.
- Working collaboratively with faculty members in development and submission of grants.

## Qualifications

---

*Basic Qualifications:* PhD degree in the physical sciences, engineering, or social sciences with expertise relevant to the focus areas noted above (1 through 7).

### **APPLICATION REQUIREMENTS**

Interested applicants should submit the following documents:

- A cover letter detailing their relevant background, interest in the specified research area, and career goals
- Current curriculum vitae
- Doctoral dissertation abstract
- Statement of Research (optional)
- Names and contact information of three references
