## General Description

---

Collaborates with business systems team to design software aligned with organizational priorities. Implements production web user interface, middleware, and database software on the .NET Framework. Creates and performs unit, integration, and regression tests for critical parts of the software. Maintains software through troubleshooting, logging, statistics and analytics gathering. Develops web standard compliant front-end code using HTML, CSS. Integrates new and emerging technologies into current development methodologies, proposing changes to website and related systems with an emphasis on information architecture and user interface. Maintains and enhances website, performing software upgrades and troubleshooting issues arising with web applications.
